

"I purchased the Tiger Star Heavy Duty Truck Rack System because I was subletting too much frame repair. Now I keep it in-house, which means more profits for Direct Hit. Also, I enjoyed working with Tiger Star. They delivered what they promised and more."

# Surround Yourself With Power

Place the pulling chain where you need it. Choose from 25 lockable chain roller positions.

No slippery collar.

Make a down pull where you want with this rack's many down pull positions.

All towers are 10 feet tall allowing you to make that high pull.

Pull with confidence. Every tower has 1/2 inch chains.

A control valve on each tower allows for individual tower control.

Plenty of power all around. All towers have a 25-ton hydraulic ram.

Each tower's pivoting action combines to provide 360° of useful pulling.

Working height is a comfortable 26 inches.
